Professional Summary: *Network Engineer* | *Full-Stack Developer* | *Web & Mobile*

Full-Stack Developer and Network Engineering graduate with practical experience in designing enterprise network architectures and building modern web and mobile applications. Motivated, rigorous, and results-oriented, with hands-on exposure to network simulation, VLAN segmentation, routing protocols (OSPF, inter-VLAN), and full-stack project delivery across academic, internship, and team contexts.

Education

Lycée Excellence 1, Nouakchott — Scientific Baccalaureate (Bac C), Mathematics and Physical Sciences 2023

Institut Supérieur de Comptabilité et d'Administration des Entreprises (ISCAE) Oct 2023 – Jul 2026
— Bachelor's Degree in Computer Networks and Telecommunications

Technical Skills

Development: JavaScript, TypeScript, React, Node.js, Express, Laravel, PHP, Flutter, Dart, .NET MAUI, Tailwind CSS, Bootstrap, Vite

Data, Tools & Networking: MySQL, Supabase, REST APIs, Git, GitHub, Linux, Cisco Packet Tracer, TCP/IP, Routing, VLANs, OSPF, DHCP, DNS, Trunking 802.1Q

Experience

Networks & Telecommunications Intern, Chinguitel July – September 2025

- Designed and simulated a Three-Tier network architecture in Cisco Packet Tracer covering 4 departments (Management, Technical, Finance, and IT).
- Segmented the network into 4 distinct VLANs, configured inter-VLAN routing, and deployed OSPF across 3 routers.
- Deployed internal network services: DHCP across 4 subnets, DNS, an intranet Web server, and an FTP server.
- Produced complete technical documentation including network diagrams, routing tables, and IP addressing plan.

Projects

ISCAE Connect — Academic Web Application Live Demo

- Built an absence management platform for ISCAE using TypeScript, React, Express, and Node.js, featuring real-time tracking and automated notifications.

Mawashi App — Mobile Application (Team of 3) Source Code

- Co-developed a mobile platform connecting livestock farmers and buyers in Mauritania using Flutter, Dart, and Supabase, including real-time messaging.

Krilywte — Car Rental Web Platform Source Code

- Designed a car booking platform for the Mauritanian market using Laravel, MySQL, and Tailwind CSS, with integrated payments and multi-user administration.

Défi Ajir 2025 — Nuit de l'Informatique (Team Project) Live Demo

- Developed an interactive web application as part of a team using React, Tailwind CSS, and Supabase, with a real-time backend.

Languages

Arabic (native), French (fluent), English (professional working proficiency)

Availability: Open to internships, work-study programs, and on-site or remote assignments.
